UNITED NATIONS AND AMERICAN FOREIGN AID POLICIES
NOVEMBER 2019
- QUESTIONNAIRE -

Fielded by: Nielsen Scarborough
Sample Size: 2,417 registered voters

Fielding Dates: October 22-30, 2019
Margin of Error: +/- 2.0%

This survey on the United Nations and American foreign aid policies will take about 20 minutes to answer. Since you have taken a survey with us before, you know that we will make no effort to sell anything to you and your answers will remain confidential. If at any time you find that you do not want to answer a question, feel free to skip it and move on to the next one.

[Briefing]

As you may know, after World War II, the United States together with most of the major countries in the world set up a number of international agreements and institutions. The aim was to enable countries to cooperate in an effort to preserve peace, promote international trade, lessen poverty through economic development, reduce hunger, respond to disasters, help refugees, promote health, and further human rights and democracy.

The most prominent institution has been the United Nations and its related global agencies, such as the World Food Program and, more recently, the World Trade Organization.

But such agreements and institutions also include regional alliances like the North Atlantic Treaty Organization or NATO and regional trade agreements like the North American Free Trade Agreement or NAFTA.

Many people think that these agreements and institutions are still valuable and important, have served the U.S. well, and should be maintained even if they require some cost. But other people think they are no longer useful, and the U.S. should disengage from them so that the U.S. is freer to pursue its interests independently.

In this survey, we will give you some background on some of the guiding principles of these agreements and institutions and have you to evaluate arguments for the U.S. maintaining or disengaging from them.

[UN SDG Intro]

One of the main organizations established in the period after World War II was the United Nations. It is currently made up of 193 Member States--nearly all of the countries in the world.

The UN provides a forum for its members to express their views and to seek to find areas of agreement and solve problems together. **It has three main parts:**

The UN Security Council is the most powerful body within the United Nations. The Security Council's main mission is to maintain international peace and security. It is made up of just fifteen members. Five of them are permanent and have the power to veto any Security Council resolution --these include the United States, the UK, France, China and Russia.

The General Assembly includes all UN members with every country getting one vote. It makes recommendations for international actions and approves the UN general budget.

The United Nations also consists of dozens of **agencies and programs** that work on particular **international problems**, such as

- Helping countries deal with refugees (UN High Commissioner for Refugees)
- Reducing hunger (World Food Program)
- Reducing poverty by promoting economic development (UN Development Program)

- Preventing the spread of nuclear weapons (International Atomic Energy Agency)
- Promoting global health, especially stopping pandemics (World Health Organization)
- Addressing environmental problems (UN Environmental Program)

UN agencies also work with members countries to agree on **international rules** in areas such as international trade, navigation and intellectual property (e.g. patents).

Q1. Overall, how familiar are you with the United Nations?

	Very familiar	A little familiar	Familiar	Not so familiar	Not familiar at all	Unfamiliar	Ref/DK

Very blue	26.9%	54.9%	81.8%	14.6%	2.8%	17.4%	0.8%

[Work Through the UN]

Currently, there is some debate about whether the US should work through the UN, together with other nations, more or less than it currently does.

[Pro: Interconnected World]

Here is an argument in favor of the US working through the UN more.

Q2. Today the world is so interconnected that many of the challenges we face cannot be addressed by countries acting separately. We really need an institution that enables all of the countries in the world to work together to deal with international problems such as war, terrorism, environmental threats, cross-border disease epidemics, international crime, global poverty and challenges to the world economy. The UN has often played a critical role in addressing these collective problems. The UN has its shortcomings, but that is only a reason to work toward making it more effective. Its importance will only grow as the world becomes even more interconnected.

How convincing or unconvincing do you find this argument?

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK
National	32.7%	40.0%	72.7%	17.6%	8.6%	26.2%	1.1%
GOP	12.2%	44.2%	56.4%	27.4%	15.7%	43.1%	0.4%
Dem.	53.4%	34.0%	87.4%	8.2%	2.9%	11.1%	1.6%
Indep.	26.3%	45.4%	71.7%	19.5%	7.4%	26.9%	1.5%
Cook's PVI (D-R)							
Very red	25.3%	43.4%	68.7%	18.9%	10.9%	29.8%	1.6%
Somewhat red	32.9%	36.0%	68.9%	21.9%	8.5%	30.4%	0.7%
Lean red	34.0%	41.0%	75.0%	14.7%	9.0%	23.7%	1.3%
Lean blue	30.9%	41.8%	72.7%	17.7%	7.0%	24.7%	2.6%
Somewhat blue	37.8%	39.2%	77.0%	14.5%	8.4%	22.9%	0.2%
Very blue	38.2%	37.2%	75.4%	16.0%	8.2%	24.2%	0.4%

[Con: UN Ineffective]

Here is a counter argument.

Q3. It's nice to think of the UN as an expression of high ideals, but in fact it is a big inefficient and bloated bureaucracy dominated by petty officials. Many are not really competent because many countries send their people to the UN as a political favor, not because they are the most qualified. Numerous countries try to pull the UN in different directions in service of their nation's interests, leading to endless negotiations. National governments, not international agencies, are best equipped to deal with whatever problems they face. They are closest to the problems, know their people the best, and are more responsive to their needs.

How convincing or unconvincing do you find this argument?

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK
National	19.5%	34.4%	53.9%	29.6%	16.1%	45.7%	0.3%

Very blue	19.4%	30.4%	49.8%	29.8%	19.0%	48.8%	1.4%

[Pro: Need for Rules-Based System]

Here is another argument in favor.

Q4. As the world grows more interconnected there is more of a need for countries to agree on rules. This applies to things like intellectual property, the use of the seas and rules of navigation, the use of space, trade disputes, and the management of materials that could be used for making nuclear weapons. Nothing major can happen at the UN without the US agreement, so it can really only be to our benefit.

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK
National	30.6%	42.8%	73.4%	18.6%	7.2%	25.8%	0.7%

Very blue	34.0%	45.0%	79.0%	13.3%	6.9%	20.2%	0.8%

[Con: Preserve US Sovereignty]

Here is a counter argument.

Q5. Because the US is the most powerful country the UN too often become a place where other countries try to gang-up on the US. This idea of making international rules does not make sense; even if some rule might seem acceptable now, it might get in our way in the future. Pretty soon there could be more and more rules, moving toward some kind of world government. We should preserve America's sovereignty.

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK
National	22.6%	26.3%	48.9%	27.2%	23.4%	50.6%	0.4%

Very blue	19.8%	25.8%	45.6%	28.9%	25.2%	54.1%	0.3%

[Pro: Burden-Sharing]

Q6. Having people from many different countries work together is surely challenging. But that is the nature of international problems. They involve many countries and cannot be solved by just one country. Furthermore, even with the inefficiencies of international organizations, by having other nations contribute resources and efforts, the US comes out ahead because the burden of dealing with international problems is shared.

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK

Very blue	31.9%	42.6%	74.5%	15.2%	9.8%	25.0%	0.6%

[Con: Other Countries are Problematic]

Q7. It really does not make sense for the US to get together with some of the worst authoritarian countries with terrible human rights records and then treat them as if they are legitimate and deserving of an equal say in world affairs. For instance, they often team up to keep the democratic countries from holding others accountable when they've violated human rights. They constantly criticize Israel while ignoring the much greater human rights violations of other countries.

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK
National	25.8%	30.3%	56.1%	26.0%	17.0%	43.0%	0.8%
GOP	47.0%	29.2%	76.2%	17.9%	5.8%	23.7%	0.2%
Dem.	8.6%	28.7%	37.3%	33.6%	27.7%	61.3%	1.4%
Indep.	22.2%	36.8%	59.0%	25.2%	14.9%	40.1%	0.8%
Cook's PVI (D-R)							
Very red	30.0%	33.5%	63.5%	20.7%	15.2%	35.9%	0.5%
Somewhat red	25.9%	27.9%	53.8%	30.1%	15.5%	45.6%	0.6%

Somewhat blue	30.2%	30.6%	60.8%	19.7%	19.2%	38.9%	0.3%
Very blue	16.8%	32.0%	48.8%	25.8%	23.2%	49.0%	2.1%

[Pro: Engages and Improves Non-Free Countries]

Q8. The fact that authoritarian countries make efforts to stop the UN from criticizing them is actually evidence of how it is having impact on them. It shows that the UN is succeeding in establishing that democracy and human rights is the right way to do things. UN agencies do investigate authoritarian governments and put pressure on them to change. This is more effective than just having the US applying pressure.

	Very convincing	Somewhat convincing	Total convincing	Somewhat unconvincing	Very unconvincing	Total unconvincing	Ref/DK

Very blue	32.8%	43.3%	76.1%	13.1%	9.4%	22.5%	1.4%

[Con: Bad Use of Tax Money]

Q9. The money that the US puts into the UN is from US taxpayers, but the UN is not accountable to US taxpayers. Do we really like the idea of US tax money going to support the UN General Assembly when it regularly passes resolutions criticizing Israel and sometimes even the US itself? It is better for our taxpayers' money to be used in ways that are directly aligned with our values and our interests.

[Sustainable Development Goals]

Now we are going to turn to some of the challenges that the UN and its member countries, including the US, are addressing.

As you may know in 2000, all of the member countries of the United Nations (including the US), plus international agencies and international non-profit aid organizations came together and agreed on a set of worldwide goals to achieve by 2015. This included goals of:

- lowering the number of people in extreme poverty
- reducing hunger
- providing access to healthcare
- ensuring education for all children

and others. These were known as the Millennium Development Goals. Some of these goals were achieved. Most notable, the number of people living in extreme poverty was cut in half. But other goals were not fully met.

In 2015, another set of goals was developed with the aim of achieving them by 2030. These are known as the Sustainable Development Goals.

Q11. How familiar are you with the Millennium Development Goals or the Sustainable Development Goals?

	Very familiar	A little familiar	Familiar	Not so familiar	Not familiar at all	Unfamiliar	Ref/DK
National	5.7%	24.6%	30.3%	36.5%	33.1%	69.6%	0.1%
GOP	4.2%	22.6%	26.8%	36.8%	36.3%	73.1%	0.0%
Dem.	6.6%	26.8%	33.4%	37.3%	29.1%	66.4%	0.2%
Indep.	6.4%	23.8%	30.2%	34.0%	35.8%	69.8%	0.0%
Cook's PVI (D-R)							
Very red	5.3%	25.4%	30.7%	42.5%	26.8%	69.3%	0.0%
Somewhat red	6.3%	20.9%	27.2%	35.2%	37.1%	72.3%	0.4%
Lean red	3.2%	25.6%	28.8%	39.6%	31.6%	71.2%	0.0%
Lean blue	6.2%	24.6%	30.8%	33.8%	35.5%	69.3%	0.0%
Somewhat blue	7.0%	24.3%	31.3%	32.2%	36.5%	68.7%	0.0%
Very blue	6.4%	29.5%	35.9%	33.7%	30.4%	64.1%	0.0%

Currently, there is some debate about whether the US should contribute more to these efforts to address international challenges including disaster relief, reducing hunger, access to clean drinking water, and so on.

[Pro: Moral]

Q12. The US is the wealthiest country in history, and it has a moral obligation to help improve the lot of the most disadvantaged. We have a long history of giving aid to people who need it the most, and we should continue that legacy. There is still essential work to be done: millions of people suffer from hunger, disease, and poverty, with many driven from their homes due to disasters and political conflict. The US government contributes just under one percent of the federal budget to these causes -- less than many other developed countries. We can do more--the need is great and we can afford it.

[Con: Responsibility is at home, spend the money at home]

Q13. The US government has a moral obligation first and foremost to help its own citizens. Life expectancy in the US is actually going down, homelessness is going up, much of the infrastructure is in dire need of repair, and the country's main social safety net -- Social Security -- is running out of money. Spending tens of billions to help other countries when we are facing our own severe problems is irresponsible. Each country should focus on solving their own problems and encourage others to do the same.

[Pro: Global Improvements Helps US]

Q14. We should think of aid programs as not only the moral thing to do, but an investment in the future. Contributing to help solve international problems and lift countries up benefits the US in many ways. Countries who get aid grow their economies, eventually becoming self-sufficient, and creating a market for US goods--11 out of America's 15 top trading partners were once receiving US foreign aid. When countries develop their economies and improve their democracies, they are less likely to have conflicts and their people are less likely to try to migrate to the US illegally.

[Con: Aid Not Effective]

Q15. Lots of foreign aid is simply not very effective. Around a quarter of all World Bank aid projects end up not meeting their goals, according to the World Bank. Too much is wasted on bureaucracies here in the US. And the money that does get to foreign countries too often ends up in the pockets of corrupt foreign officials. There are numerous cases where countries received aid, but only got poorer. This happened all throughout Africa -- as aid increased many countries actually got poorer. When governments can rely on aid money instead of taxes from their own people, they become unaccountable to their people. Before the US starts giving more aid, these countries need to clean up their act. The US government may think it knows what is needed in these countries, but experience shows many efforts simply do not work.

[Pro: Aid is Effective]

Q16. When we make a commitment to helping people get on their feet it can make a big difference. For example: International aid over the last 25 years has saved 700 million lives, helped reduce the number of malnourished people by almost half, and helped reduce the number in living extreme poverty by more than half. This is from health aid which has provided 500 million children vaccines and helped stop disease epidemics, and food aid which has provided nutritional meals to millions of children across the world and helped ensure their physical and mental development. Aid through education and economic development has helped people be more productive and escape poverty, which creates healthier and more stable economies and greater economic growth for everybody.

[Con: Creates Dependency]

Q17. While aid may be able to produce some short terms gains, it can also create dependency. People get in the habit of expecting handouts. And when governments receive foreign aid, they do not need to rely on their people for taxes as much, which makes them become less accountable to their own citizens. By making goods more readily available at no cost or low cost, aid can actually undercut local producers, making it harder for them to make a sustainable business.

We are now going to explore what needs to be done to meet these Sustainable Development goals, primarily for people in poor countries. In each case, there are steps that the governments in those low-income countries need to take. There are also steps that businesses need to take to invest in those low-income countries.

But, a critical element is additional aid that would be needed from the high-income countries. All of the high-income countries, including the US, participated in setting these goals. Since the goals were set, estimates were done to establish how much it would cost to meet these goals. So, the question now is whether the high-income countries will commit to contributing the necessary additional funds to meet the goals.

A proposed framework is to have all high-income companies contribute the same amount in terms of the percentage of their economy. That means the countries with larger economies would pay more. But all would be paying the same percentage of their economies.

For each goal we will tell you the estimate for how much additional aid will be required to meet that goal and what the US share would be, based on the size of its economy compared to the other high-income countries.

There are various ways that the US could raise the necessary funds including increasing the US debt, cutting spending or raising taxes. For the sake of this exercise we will assume that the funds would be raised by increasing all Federal taxes equally (except those committed to Social Security and Medicare).

This would include the amount of Federal income taxes you pay. So, say that to meet a certain goal, the total of US taxes would need to go up 1%. This means that the total of your income taxes would go up 1%. So, say your income taxes are \$5,000 a year. A 1% increase would mean that you would pay an extra \$50 per year.

[Reducing Chronic Hunger]

One key goal is to eliminate chronic hunger. Chronic hunger means that people do not have enough food on a long term and persistent basis. It does not refer to hunger that might result from a natural disaster or an outbreak of a civil conflict. The UN estimates that about 815 million people, or about 11% of the world’s population, are suffering from chronic hunger. This number has been going down in recent decades--in 1990 about one billion people suffered from chronic hunger.

Still, each year about 9 million people die as a result of starvation or hunger-related diseases. Addressing this challenge requires not only providing food directly, but helping to provide farmers with water, access to markets, agricultural equipment, and training in farming methods.

The UN estimates that eliminating nearly all chronic hunger by 2030 would require an additional \$93 billion a year until 2030. This would be for providing food and agricultural development, in addition to other anti-poverty programs. This would mean that 9 million fewer people would die each year.

The US share of this amount would be about \$36 billion. This would require the total of US Federal taxes going up about 1.7%, which means your Federal taxes would go up by 1.7% as well.

Q18. So, if other countries would be willing to contribute their part to eliminate chronic hunger in the world by 2030, do you think the US should or should not be willing to contribute its part by contributing \$36 billion.

[IF “SHOULD NOT WILLING” (Q18 = 2) OR SKIP, THEN PRESENT Q18a]

Q18a. As an alternative, do you think the US should be willing to commit to the goal of cutting chronic hunger **in half** by 2030, if other countries were willing as well? This would require the US to contribute \$18 billion, which could be done by increasing the total Federal taxes by 0.85%, including your Federal taxes.

Very blue	6.3%	21.3%	0.6%

[Clean Drinking Water and Sanitation]

Another key goal is ensuring access clean water and a sanitary sewage system.

According to the UN's World Health Organization, 844 million people lack access to clean water, and 4.5 billion people lack a sanitary sewage system. As a result, people living in these conditions suffer from resulting infections. This results in illness and reduces their ability to work, thus reducing their incomes.

Approximately 500,000 people die each year from illnesses due to lack of clean water and sanitary sewage systems.

Addressing this challenge requires building dams, water treatment plants, water lines, and sewage systems to purify and distribute water, and to dispose of human waste.

The World Bank estimates that to provide universal access to clean water and sanitary sewage systems would require new commitments of additional \$107 billion a year. This would mean that 500,000 fewer people would die each year.

The US share of this amount would be about \$42 billion. This would require the total of US Federal taxes going up about 1.9%, which means your Federal taxes would go up by 1.9% as well.

Q19. So, if other countries would be willing to contribute their part to provide universal access to clean water and sanitary sewage systems by 2030, do you think the US should or should not be willing to contribute its part by contributing \$42 billion.

	Should be willing	Should not be willing	Ref/DK

[Vaccines]

Another key challenge is ensuring that every person gets the necessary vaccines, especially children.

Every year, millions of people die from diseases that could have been prevented by vaccinations. In 2017, about 20 million children did not receive regular life-saving vaccinations.

Addressing this challenge requires providing communities with a steady supply of vaccines, getting doctors to areas that need them, and training new healthcare workers.

The World Health Organization estimates that to provide universal access to vaccines will cost an additional \$28 billion a year for ten years. They estimate that this could prevent the deaths of around 10 million people.

The US share of this amount would be about \$11 billion. This would require the total of US Federal taxes going up about 0.5%, which means your Federal taxes would go up by 0.5% as well.

Q20. So, if other countries would be willing to contribute their part to provide universal access to vaccinations, do you think the US should or should not be willing to contribute its part by contributing \$11 billion.

[Education]

Another key goal is providing education to all children. According to the UN there are about 264 million children who are not receiving education. This stunts their ability to be economically productive for their entire adult lives. Aid for education for children (kindergarten through 12th grade) goes towards building schools, providing educational materials, and training teachers. In the long run, because this would make people more economically productive, it would reduce the amount of hunger and poverty in the world.

The UN estimates that for all children to get education through 12th grade by 2030, high income nations would need to contribute an additional \$39 billion each year. The US share of this amount would be about \$14 billion. This would require the total of US Federal taxes going up about 0.6%, which means your Federal taxes would go up by 0.6% as well.

Q21. So, if other countries would be willing to contribute their part to ensure that all children get access to education through the 12th grade by 2030, do you think the US should or should not be willing to contribute its part by contributing \$14 billion.

[Energy]

Another key challenge is providing access to energy, primarily electricity. According to the World Bank, one billion people live without access to electricity. Gaining access to electricity is a major factor in reducing hunger, improving health, and eliminating poverty. Electric stoves reduce the use of unhealthy and environmentally harmful fuels, lighting enables children to study and connectivity enables more efficient economic production, especially for farmers.

Aid for energy goes towards building power plants (especially ones using renewable sources such as solar,) and electrical distribution grids; and training professionals to maintain these systems.

A World Bank report found that to provide access to electricity for everybody in the world by 2030 would require \$34 billion a year.

The US share of this amount would be about \$13 billion. This would require the total of US Federal taxes going up about 0.6%, which means your Federal taxes would go up by 0.6% as well.

Q22. So, if other countries would be willing to contribute their part to ensure that all people get access to energy, primarily electricity, by 2030, do you think the US should or should not be willing to contribute its part by contributing \$13 billion.
