We are going to share with you some proposals that have been put forward that have the goal of reducing the price of drugs. For each one, please select whether you favor or oppose it.

Q1. As you may know, many drug companies charge a higher price for drugs in the US than in other developed countries. To ensure that prices are not higher in the US, it has been proposed that the federal government set maximum prices based on what the drugs are sold for in other developed countries.

When a company develops a new drug, they can get a patent so that they are the only company that can sell the drug for up to 20 years. Some drug companies have been extending the amount of time their drug has no competition by paying other generic drug companies to hold off selling the drug, enabling the original patent holder to continue to charge higher prices.

Q2. Here is a proposal: Make it illegal for drug companies—whose patent on a drug has come to an end—to pay generic drug companies to hold off making and selling that drug.

As you may know, some patented drugs have been developed with the aid of federal funding.

Q3. Here is a proposal: In the event the federal government:

- determines the price of a patented drug is unaffordable to some or most of the people that need it,
- and that drug was developed with the aid of federal funding,

the federal government will override the drug company's patent and license other companies to produce the drug.

Now, let's turn to a proposal about the tax credit for parents with children under age 17. A tax credit reduces the total amount of taxes a person owes. Some tax credits are also refundable, so if the tax credit is larger than the amount of taxes a person owes, they keep what is leftover.

Q11. As you may know, a law was passed in 2021, Congress passed a law to temporarily increase the Child Tax Credit from \$2,000 up to \$3,600 per child, and to make it fully refundable. That law expired in 2022, and the tax credit has gone back down to being \$2,000 and partially refundable.

Now, we'll explore proposals for helping low-income people who are working but are still living under or close to the poverty line.

One federal program that helps low-income workers is called the **Earned Income Tax Credit (EITC)**. EITC supplements their income by giving them a tax credit. If they do not owe any Federal taxes, they can get the credit directly.

Here are some proposals for changing the limits on the amount of the credit and who would qualify.

Currently, EITC is much lower for workers without children than workers with children. Here are some proposals for increasing the EITC for workers without children.

As you may know, since World War II, the United States together with most of the major countries in the world have set up agreements and institutions to promote international trade by mutually lowering tariffs and agreeing on a set of rules to ensure that trade is done fairly. Tariffs are taxes paid by US companies on products imported from other countries.

However, lately there has been some debate about this.

We will now turn to the topic of federal taxes. As you probably know the US government runs a deficit, meaning that more money is spent than is taken in from taxes. We will look at possible changes to taxes. For each, you will see the impact it would have on the amount of revenue the government takes in.

There have been debates about what federal tax rates should be on people with high incomes.

Federal agencies are government organizations created by Congress and signed into law by Presidents, to fulfill a specific mission. Some agencies are **independent agencies**, which means they are meant to operate more independently from Presidents. They are generally run by a group of people – known as a commission – made up of members of both parties.

Here are some examples:

- Federal Elections Commission (regulates federal elections)
- Federal Reserve's regulatory functions (regulates banking and the money supply)
- Federal Communications Commission (regulates TV, radio and internet)
- National Labor Relations Board (regulates workers rights)
- Security and Exchange Commission (regulates the stock market)

Here are proposals to reform the treatment of people in prison:

First, here are proposals related to the use of solitary confinement which means putting a prisoner in a cell by themselves for 22-24 hours a day. People are put in solitary confinement for the following purposes:

- as punishment for minor or serious violations of prison rules
- for the prisoner’s safety (protection from other inmates, or they are suicidal)

Currently, there are no federal laws that regulate how many days a person can be kept in solitary confinement, or for what purposes.

Proposals have been put forward to **limit the use of solitary confinement**.

Q96. Which do you favor:

Q96	Prohibit any use of solitary confinement	Limit the use of solitary confinement only when it is necessary for the prisoner’s safety, and to no more than 15 days in a row or 20 days in a two-month period	Limit the use of solitary confinement as punishment for serious violations only or for their own safety, and to no more than 30 days in a row or 40 days in a two-month period	Prohibit + Limit the use of solitary confinement	Do not limit the use of solitary confinement	Ref / DK

Methodology

Fielding and Sample Size: The surveys were fielded by the Program for Public Consultation (PPC) at the University of Maryland's Civic Innovation Center, with representative non-probability samples obtained from multiple online panels, including Cint, Dynata and Prodege.

Survey 1, February 2026

Field Dates: February 11-26, 2026 Total Sample Size: 2509 Response Rate: 7.6%
Four-fifth Sample Sizes: 1991 to 2020

Survey 2, March 2026

Field Dates: March 11-19, 2026 Sample Size: 1200 Response Rate: 8.3%

Pre-Stratification and Weighting: The samples were pre-stratified and weighted by age, race, ethnicity, gender, educational attainment, household income, region, and home ownership. National benchmarks were obtained from the Census Bureau's 2024 and 2025 American Community Surveys, as well as the 2024 Current Population Survey's Annual Social and Economic Supplement.

The samples were also weighted by partisan affiliation to balance the sample and ensure a roughly representative distribution of Republicans and Democrats, as well as Independents, including those that register as unaffiliated, or chose another party affiliation.

Survey 1, February 2026

Confidence Interval of Four-fifth Samples: +/-2.9% Max Weight: 2.51 Mean Weight: 1.0

Survey 2, March 2026

Confidence Interval: +/-2.9% Max Weight: 1.92 Mean Weight: 1.0

Confidence Intervals were calculated using the sample variance of the weights using the following formula:

$CI = \text{Square root } ((1+\text{variance})/\text{sample size})$

Sample Collection: Sample collection was managed by Quant-E with oversight from PPC. Samples were drawn from multiple large online panels, including Cint, Prodege, and Dynata, whose members are recruited using non-probability sampling methods. The selected sample was invited to participate via email invitation, push notification, or SMS for cell phone users. Respondents were offered cash or cash-equivalent incentives to participate in the survey.

Data Collection and Privacy: Survey responses were collected directly on the Qualtrics platform. Only respondents with a provided link could take the survey, using their computer, laptop, tablet, or mobile phone.

Privacy and security measures were taken to ensure that data was collected in adherence to the European Union's General Data Protection Regulation policies for data privacy and security, as well as the California Consumer Privacy Act (CCPA).

Quality Control: Quality control measures in the sample collection process to disqualify duplicate respondents and survey bots included:

- checking respondents' IP addresses to determine if there are duplicate respondents
- employing an "operating system & Web browser check" to determine if there are any cross-panel duplicates
- using hCaptcha to detect and disqualify survey bots.

Quality control measures within the survey to disqualify dishonest or mischievous respondents, as well as survey bots, included:

- an attention-check question, e.g. Select the word that does not belong. [Tuesday]; [Friday]; [April]; [Wednesday]
- an honesty question, e.g. What have you done in the past week? Select all that apply. [Won a gold medal at the Olympics]; [Watched TV]; [Got a license to operate a Class SSGN submarine]; [Read a book]
- a speed limit, which disqualified respondents who moved through the first quarter of the survey at a pace roughly triple the average reading speed.

Lastly, respondents were removed from the sample who answered less than half the substantive questions, or who engaged in straight-lining.
