

SCHOOL OF PUBLIC POLICY

PROGRAM FOR PUBLIC CONSULTATION

Federal Taxes

- PENNSYLVANIA CD1, CD7, CD8, CD10 and NATIONAL -

Field Dates:

Pennsylvania CD1, CD7, CD8, CD10: July 21 – August 5, 2026

National: February 11-26, 2026

Sample Sizes:

Pennsylvania CD1: 500

Pennsylvania CD7: 503

Pennsylvania CD8: 504

Pennsylvania CD10: 501

National: 2,509

Confidence Interval:

Pennsylvania CD1: +/-5.6% **Pennsylvania CD7:** +/-6.0% **Pennsylvania CD8:** +/-6.7%

Pennsylvania CD10: +/-6.7% **National:** +/- 2.9%

Samples Provided by: Multiple online opt-in panels, including Cint, Dynata and Prodege. Sample collection and quality control was managed by QuantifyAI under the direction of the University of Maryland's Program for Public Consultation.

Note: Rows may not add to 100% due to rounding

[Q1-26 and Q52-64 withheld for future release, Q27-40 previously released]

We will now turn to the topic of federal taxes. As you probably know the US government runs a deficit, meaning that more money is spent than is taken in from taxes. We will look at possible changes to taxes. For each, you will see the impact it would have on the amount of revenue the government takes in.

There have been debates about what federal tax rates should be on people with high incomes.

Q41. For households with income of \$200,000 to \$500,000, the effective income tax rate (the actual average rate after tax credits and deductions) is currently about 21%. Do you favor:

1. Raising it to 26% (increasing revenue by \$249 billion)
2. Raising it to 24% (increasing revenue by \$145 billion)
3. Keeping it at 21%
4. Lowering it to 19% (reducing revenue by \$104 billion)
5. Lowering it to 17% (reducing revenue by \$208 billion)

	Raise to	Raise to	TOTAL	Keep at	TOTAL	Lower to	Lower to	Ref
--	----------	----------	-------	---------	-------	----------	----------	-----

As you may know, income from capital gains, such as the sale of stocks and property, is taxed at a rate (15-20%) that is lower than ordinary income.

Do you favor raising the tax on capital gains by taxing them at the same rate as ordinary income, for the following income groups:

Q44. Households with incomes of \$200,000 to \$500,000 (increasing revenue by \$26 billion)

	Favor	Oppose	Ref/DK

Q47. As you may know, the estate tax is a tax on large inheritances, which includes both property and financial assets like stocks and bonds. Currently there is no tax on the first \$15 million for individuals and \$30 million for married couples, but the amount above that is taxed.

Proposals have been put forward to change the estate tax. Do you favor taxing inherited wealth:

1. Above \$3.5 million for individuals and \$7 million for married couples (increasing revenue by \$54 billion)
2. Above \$5 million for individuals and \$11 million for married couples (increasing revenue by \$17 billion)
3. Above \$15 million for individuals and \$30 million for married couples (the current rate—so no change in revenue)
4. Eliminating the estate tax (reducing revenue by \$34 billion)

	Apply tax to estate >\$3.5M (+\$54B)	Apply tax to estates >\$5B (+\$17B)	TOTAL TAX MORE	Keep the current estate tax levels	Eliminate the estate tax (-\$34B)	Ref/DK
National	31%	33%	64%	17%	19%	0%

Republicans	22%	20%	42%	16%	41%	2%
Democrats	38%	29%	67%	19%	12%	2%

Now let's look at a proposal for a new tax on people with very high net worth—the top one tenth of one percent of the population.

Q48. A proposal has been put forward to have a tax on wealth (this includes assets such as stocks, bonds and property) over a certain amount. The first \$50 million of wealth would not be taxed. Wealth above \$50 million would be taxed at 2%. Wealth over \$1 billion would be taxed at 3%. Do you favor:

	Having this new proposed tax on wealth (increasing revenue by \$200 billion)	Continuing not to have a tax on wealth	Ref/DK

Methodology

Fielding and Sample Size: The surveys were fielded by the Program for Public Consultation (PPC) at the University of Maryland's Civic Innovation Center, with representative non-probability samples obtained from multiple online panels, including Cint, Dynata and Prodege.

National

Field Dates: February 11-26, 2026 Total Sample Size: 2509 Response Rate: 7.6%
Four-fifth Sample Sizes: 1991 to 2020

Pennsylvania CD1

Field Dates: July 21 – August 3, 2026 Sample Size: 500 Response Rate: 8.6%

Pennsylvania CD7

Field Dates: July 21 – August 5, 2026 Sample Size: 503 Response Rate: 8.7%

Pennsylvania CD8

Field Dates: July 21 – August 4, 2026 Sample Size: 504 Response Rate: 8.2%

Pennsylvania CD10

Field Dates: July 21 – August 1, 2026 Sample Size: 501 Response Rate: 7.4%

Pre-Stratification and Weighting: The samples were pre-stratified and weighted by age, race, ethnicity, gender, educational attainment, household income, and home ownership. Benchmarks were obtained from the Census Bureau's 2024 and 2025 American Community Surveys, as well as the 2024 Current Population Survey's Annual Social and Economic Supplement.

The national sample was also weighted by Census region and partisan affiliation. In the Pennsylvania samples, the distribution of partisan affiliation was within expectations, based on voter registration data for non-leaners and/or Cook's Partisan Voting Index for leaners.

National

Confidence Interval of Four-fifth Samples: +/-2.9% Min Weight: 0.25 Max Weight: 2.51 Mean Weight: 1.0

Pennsylvania CD1

Confidence Interval: +/-5.6% Min Weight: 0.14 Max Weight: 5.53 Mean Weight: 1.0

Pennsylvania CD7

Confidence Interval: +/-6.0% Min Weight: 0.13 Max Weight: 6.50 Mean Weight: 1.0

Pennsylvania CD8

Confidence Interval: +/-6.7% Min Weight: 0.11 Max Weight: 6.50 Mean Weight: 1.0

Pennsylvania CD10

Confidence Interval: +/-6.7%

Min Weight: 0.05

Max Weight: 6.50

Mean

Weight: 1.0

Confidence Intervals were calculated using the sample variance of the weights using the following formula:

$CI = \text{Square root } ((1+\text{variance})/\text{sample size})$

Sample Collection: Sample collection was managed by Quant-E with oversight from PPC. Samples were drawn from multiple large online panels, including Cint, Prodege, and Dynata, whose members are recruited using non-probability sampling methods. The selected sample was invited to participate via email invitation, push notification, or SMS for cell phone users. Respondents were offered cash or cash-equivalent incentives to participate in the survey.

Data Collection and Privacy: Survey responses were collected directly on the Qualtrics platform. Only respondents with a provided link could take the survey, using their computer, laptop, tablet, or mobile phone.

Privacy and security measures were taken to ensure that data was collected in adherence to the European Union's General Data Protection Regulation policies for data privacy and security, as well as the California Consumer Privacy Act (CCPA).

Quality Control: Quality control measures in the sample collection process to disqualify duplicate respondents and survey bots included:

- checking respondents' IP addresses to determine if there are duplicate respondents
- employing an "operating system & Web browser check" to determine if there are any cross-panel duplicates
- using hCaptcha to detect and disqualify survey bots.

Quality control measures within the survey to disqualify dishonest or mischievous respondents, as well as survey bots, included:

- an attention-check question, e.g. Select the word that does not belong. [Tuesday]; [Friday]; [April]; [Wednesday]
- an honesty question, e.g. What have you done in the past week? Select all that apply. [Won a gold medal at the Olympics]; [Watched TV]; [Got a license to operate a Class SSGN submarine]; [Read a book]
- a speed limit, which disqualified respondents who moved through the first quarter of the survey at a pace roughly triple the average reading speed.

Lastly, respondents were removed from the sample who answered less than half the substantive questions, or who engaged in straight-lining.
